WHY TPRM IS NO LONGER OPTIONAL

Compliance does not equal security.

Breaches at Microsoft, Okta and SolarWinds happened despite ISO 27001 and SOC 2 — and over half of organisations run no structured TPRM at all.

50%+ have no TPRM

More than half of organisations lack any formal third-party risk process — vendors left unmonitored.

Checkbox ≠ safe

ISO 27001 and SOC 2 compliance did not prevent breaches at the world's largest tech firms.

Expanding attack surface

Cloud, new tech and longer supply chains multiply third-party entry points.

Checkbox → risk-based

Move from ad hoc vendor reviews to a mature programme where third parties reduce risk with you.

Regulatory pressure

Laws and standards increasingly mandate formal TPRM — non-compliance carries penalties.

Financial & operational risk

Third-party failures cause disruption, concentration risk and reputational damage.
